

FS200 (1,250 lb) Specifications For Bare Panels On QuickLoc Corner Bolt System

NOTE: These specifications conform to CSI MasterFormat 2004/2005 Edition, AIA MasterSpec Section 096900 and to CSI MasterFormat 1995 Edition, AIA MasterSpec Section 10270

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions Contract, including General and Supplementary Conditions and Division 01 Specifications Sections, apply to this section.

1.2 SUMMARY

- A. This section includes:
 - 1. Access flooring panels and understructure
 - 2. Various accessories, including, but not limited to ramps, steps and electrical boxes.
- B. Related Sections include the following:
 - 1. Division 3 Section “Cast-In-Place Concrete” for concrete floor sealer.
 - 2. Division 26 Section “Grounding and Bonding for Electrical Systems” for connection to ground of access flooring understructure.
Note: The electrical contractor shall provide the necessary labor and materials to electrically connect the access flooring to the building ground to comply with this section.
- C. Quantity Allowances: Provide the following as specified in Division 01 Section “Allowances.”
 - 1. Cutouts in floor panels
 - 2. Service outlets

1.3 DEFINITION

- A. Access flooring: A complete portable assembly of modular floor panels on an elevated support system (understructure), forming an accessible under-floor cavity to accommodate electrical and mechanical service.
- B. ESD: Electrostatic Discharge. The transfer of electric charge between bodies at different potentials.

1.4 SYSTEM DESCRIPTION

- A. Access Flooring System: Assemblies composed of modular floor panels that are fastened to adjustable height pedestals.

1.5 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide access flooring system capable of supporting the following loads and stresses within limits and under conditions indicated, as demonstrated by testing manufacturer’s current standard products according to referenced procedures in latest revised edition of Ceilings and Interior Systems Construction Associates (CISCA) “Recommended Test Procedures for Access Floors” referenced elsewhere in this section as CISCA/AF or, if not specified, manufacturers standard method
 - 1. Concentrated Loads: Provide floor panels capable of withstanding a concentrated design load of 1,250 lbs. with a top-surface deflection under load not to exceed an average of 0.100 inch and a permanent set not to exceed 0.010 inch according to CISCA/AF Section 1, “Concentrated Loads”.
 - 2. Ultimate Load: Provide access flooring system capable of withstanding a minimum ultimate load of three (3) times the concentrated load without failing, according to CISCA/AF, Section 2, “Ultimate Loading”.
 - 3. Rolling Loads: Provide access flooring system capable of withstanding rolling loads of the following magnitude, with a combination of local and overall deformation not to exceed 0.040 inch after exposure to rolling over CISCA/FA Path A or B, whichever path produced the greatest top surface deformation, , according to CISCA/AF, Section 3, “Rolling Loads”.
 - a. CISCA/AF Wheel 1 Rolling Load: 1,000 lbs.
 - b. CISCA/AF Wheel 2 Rolling Load: 800 lbs.

4. Pedestal Axial Load Test: Provide pedestal assemblies, without panels in place, capable of withstanding a 9,000 lbs axial load per pedestal, according to CISCA/AF Section 5, "Pedestal Axial Load Test", without any permanent deformation.
 5. Pedestal Overturning Moment Test: Provide pedestal assemblies, without panels in place, capable of withstanding an overturning moment of 1,000 inch-pounds per pedestal, according to CISCA/AF Section 6, "Pedestal Overturning Moment Test", when glued to a clean, sound, uncoated concrete surface.
 6. Uniform Load Test: Provide access flooring system capable of withstanding a uniform load of 450 lbs/ft² placed over one panel with a permanent set not to exceed 0.010 inch after the load is removed, according to CISCA/AF Section 7, "Uniform Load Test"
Note: The uniform load rating of an access floor panel shall not be confused with the "uniform live load" as specified for use in seismic calculations for seismic zone applications.
 7. Drop Impact Load Test: Provide access flooring system capable of withstanding a drop impact load of 175 lbs. dropped from a height of 36 inches without a failure of the system, according to CISCA/AF Section 8, "Drop Impact Load Test".
 8. Panel Drop Test: Provide access flooring system with panels capable of meeting all structural performance requirements specified, after the panel is dropped from a height of 36 inches onto a concrete surface.
- B. Seismic Performance: Provide access flooring system capable of withstanding the effects of seismic motions as calculated for the area of installation.
- C. ESD-Control Properties:
1. Provide access flooring system with Panel-to-Understructure resistance of not more than 10 ohms as measured without floor coverings, according to test method as specified in ASTM F 150 with 500-V applied voltage with one electrode in contact with the bare steel on the top face of the panel and one electrode attached to the tube of the pedestal.
 - a. Corner-Lock screw fasteners must have cutting teeth on bottom surface of screw head that will cut through epoxy coating when tightened to the proper torque and make positive contact with the steel body of the panel top sheet to assure electrical continuity between panel and understructure to maintain compliance to required maximum resistance of 10 ohms.

1.6 SUBMITTALS

- A. Product Data: For each type of product indicated.
1. Shop Drawings: Include complete layout of access flooring system based on field verified dimensions.
 - a. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories and understructure.
 - b. Detail Cut Sheets for each type of product indicated, including accessories, to show the information necessary to make a full evaluation of the entire flooring system.
 - c. For installed products indicated to comply with seismic design loads, include calculated structural analysis data signed by the qualified engineer responsible for their preparation.
 2. Samples for Initial Selection: For each type of flooring material indicated and exposed finish indicated, submit samples in the form of manufacturers color charts consisting of actual units or sections of units showing full range of colors, textures and patterns
- B. Product Certificates: For each type of access flooring system indicated, to certify that the flooring system meets the requirements of these written specifications and signed by a qualified employee of the manufacturer.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, or performed by access flooring manufacturer and witnessed by a qualified testing agency, for each type of flooring material and exposed finish.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer who is approved by the access flooring manufacturer for installations of the type of access flooring indicated for this project.
- B. Source Limitations: Obtain access flooring system through one source from a single manufacturer.
- C. Regulatory Requirements: Fabricate and install access flooring system to comply with NFPA 75 requirements for raised flooring.
- D. Provide floor panels that are clearly marked with manufacturer's name and panel type.
- E. Mockups (if required): Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockup of typical access flooring assembly as shown on Drawing. Size to be an area no less than [three] floor panels in length by [three] floor panels in width.
 2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- G. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."
1. Review connection with mechanical and electrical systems.
 2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver access flooring components in original, unopened packages, clearly labeled with manufacturer's name and item description.
- B. Handle and store packages containing access flooring in a manner which avoids overloading building structure.

1.9 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install access flooring until installation area is enclosed and has an ambient temperature of between 50 degrees Fahrenheit and 85 degrees Fahrenheit (10⁰ C to 29⁰ C) and a relative humidity of not less than 20 percent and not more than 80 percent.

1.10 COORDINATION

- A. Coordinate locations of mechanical and electrical work in under-floor cavity to prevent interferences with access flooring pedestals
- B. Pre-mark pedestal locations on a grid of 10' x 10' on sub-floor so that mechanical and electrical work can take place without interfering with pedestals.
- C. Do not proceed with installation of access flooring until after substantial completion of other performable construction within affected spaces.

1.11 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed, are packaged with protective covering for storage and identified with labels clearly describing contents.
 1. Standard field panels – As indicated
 2. Pedestals – As indicated

PART 2 - PRODUCTS

2.1 FLOOR PANELS AND UNDERSTRUCTURE

- A. Manufacturers: Subject to compliance with requirements, provide access flooring by ASM Modular Systems, Inc., consisting of FS200 access floor panels supported on a Quick-Loc corner-bolted understructure as supplied by Computer Floors, Inc (973-340-3666).
- B. Floor Panels General: Provide modular panels complying with the following requirements, that are interchangeable with other standard field panels, and can be easily relocated by one person, using a lifting device, without disturbing adjacent panels or understructure. Installed panels with floor covering in place are to be free of exposed metal edges.
 1. Nominal Panel Size: 24" x 24"
 2. Fabrication Tolerances: Fabricate panels to the following tolerances with squareness tolerances expressed as the difference between diagonal measurements from corner to corner.
 - a. Size and Squareness: Plus or minus 0.010" of required size, with squareness tolerance of plus or minus 0.015".
 - b. Flatness: Plus or minus 0.020" , measured on a diagonal on top of the panel.
 3. Panel Attachment to Understructure: By Bolting to pedestal head. Provide panels with holes in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.
- C. Cementitious-Filled, Formed-Steel Panels: Fabricate panels with a die formed all-steel bottom pan consisting of a minimum 64 embossments, fully welded to a die-cut full-hard steel top sheet to form a structural unitized construction. Completed panels to be filled with light-weight cementitious fill. Panels

to be cleaned with 3-part wash and rinse system, prior to applying a protective powder-coat epoxy finish.

1. Solid Panels: Flat, solid top surface
- D. Pedestals: Provide manufacturer's standard pedestal assembly including base, column with provisions for height adjustments, and head (Cap), made of steel.
 1. Base: Square base plate with not less than 16 square inches of bearing area.
 2. Column: Welded to base plate and of height required to bring finished floor to elevations indicated.
 3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than 2 inches and for locking at a selected height, so deliberate action is required to change height setting and prevents vibratory displacement.
 4. Construct pedestal adjusting rod of minimum 3/4" diameter solid steel, and vertical column of minimum 7/8" square steel tubing. All steel components to have manufacturer's standard galvanized finish.
 5. Head: Pedestal head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
 6. Dual Panel Support: Pedestal head shall be designed to provide a combined support of the panel edge lip and the bottom corner of the panel. Pedestals with flange only support will be unacceptable.

2.2 FLOOR PANEL COVERINGS

- A. General: Provide bare panels without wear-surface covering.

2.3 ACCESSORIES

- A. Service Cutouts: Fabricate cutouts in floor panels to accommodate cable penetrations and service outlets. Comply with requirements indicated for size, shape, number, and location. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with standard performance requirements.
 1. Fit cutouts with manufacturer's standard grommets in size indicated or, where size of cutouts exceeds maximum grommet size available, trim edge of cutouts with manufacturer's standard plastic molding having tapered top flange. Furnish removable covers for grommets.
 2. Provide foam-rubber pads for sealing annular space formed in cutouts by cables. Trim edge of cutout with molding having a double-flanged internal edge for containing and supporting foam pads.
- B. Vertical Closures (Fascia): Where under floor cavity is not enclosed by abutting walls or other construction, provide manufacturer's standard metal closure plates with manufacturer's standard finish.
- C. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, with non-slip raised-disc runner or carpet tile, and of same materials, performance, and construction requirements as the access flooring.
- D. Steps: Provide steps of size and arrangement indicated with floor covering to match access flooring. Apply non-slip aluminum nosing to treads, unless otherwise indicated.
- E. Panel Lifting Device: Manufacturer's standard portable lifting device of type and number required for lifting panels.
 1. Provide the following quantity: one lifting device per 5,000 S/F

PART 3 - EXECUTION

3.1 PREPARATION

- A. Examine sub-floor for any problems that would prevent a satisfactory installation of access floor, such as moisture or unevenness of top surface. Do not proceed with installation until sub-floor is clean, dry and level as completed by other trades.
- B. Verify field dimensions to contract drawings for size of area of installation, height and level of recessed slabs, door openings, ledges, etc.
- C. Floor Sealers: Verify that any concrete sealer that has been used is compatible with pedestal adhesive.
- D. Access To Installation Area: General Contractor shall provide clear access to installation area throughout entire duration of installation of access floor that is free of construction debris and other trades.
- E. Storage Of Materials: Area to receive and store access floor materials shall be enclosed and dry. Storage area shall be maintained at a temperature of not less than 40° F and not more than 95° F (4° C to 35° C), with a relative humidity level between 20% min. to 80% max.
- F. Area Of Installation: Shall be maintained throughout entire duration of installation of access

floor at a temperature of 50⁰ F min. to 85⁰ F max. (10⁰ C to 29⁰ C) and at 20% min. to 80 % max. relative humidity.

Prior to installation, all floor panels shall be stored for at least 24 hours in a dry enclosed area at no less than 40⁰ F and no more than 95⁰ F (4⁰ C to 35⁰ C).

3.2 INSTALLATION

- A. Install access floor system and accessories under supervision of the access flooring manufactures authorized representative to ensure rigid, firm installation that complies with performance requirements and is free of vibration, rocking, rattles and squeaks.
- B. Layout floor panel installation to keep the number of cut panels at the floor perimeter to a minimum.
- C. Set pedestal in adhesive as recommended by the computer flooring manufacturer to provide full bearing of the pedestal base on the sub floor.
 - 1. Pedestal locations shall be established from approved shop drawings to allow mechanical and electrical work to be installed without interfering with pedestal installation.
 - 2. Pedestals shall be attached to sub-floor using pedestal adhesive.
- D. Install floor panels securely in place and properly seated with panel edges flush. Do not force panels into place.
- E. Scribe panels at perimeter to provide a close fit with adjoining construction with no voids greater than 1/8” where panels abut vertical surfaces.
- F. Install accessories according Manufacturer’s instructions.
- G. Clean up dust, dirt and construction debris caused by floor installation.
- H. Level installed access floor to within 0.10” over the entire access flooring area and within 0.060” of true level in any 10 ft. distance.

3.3 ADJUSTING, CLEANING AND PROTECTION

- A. During installation, all traffic on access floor shall be directed by access floor installer.
 - 1. No traffic, other than access floor installer, shall be allowed on the floor area for 24 hours after installation to allow the pedestal adhesive to set.
 - 2. No access floor panels shall be removed by other trades for 72 hours after installation.
- B. Replace any flooring panels that are stained, scratched, or otherwise damaged or that do not comply with specified requirements.
- C. General contractor and/or owner shall provide and maintain suitable protection to prevent damage to completed access floor throughout entire duration of installation.

END OF SECTION 096900

All specifications are subject to change without notice or obligation.
